

# The all-in-one solution for modern pig production.

BigFarmNet  
technology

With BigFarmNet, we will be making the life of the pig producer much easier. Imagine that all controllers, computers and sensors on your farm are able to communicate and you could control and manage your entire farm with one single program for all applications: be it feeding or climate, be it just one house or an entire farm complex – all from your Windows PC, or our new »717« or even your iPhone. BigFarmNet the all-in-one solution for your farm.

Wouldn't that be nice?
