FRESH AIR FILTER

AirProTec PRRS Filtration

The new AirProTec filtration, developed by Big Dutchman, is a modular PRRS capturing filtration system with integrated cooling for swine buildings. Unlike conventional filtration procedures, AirProTec operates under positive pressure ventilation, which will not allow any fresh air into the barns without being filtered.

- | better animal health thanks to **highest filtering accuracy**
- | overpressure ensures a **high degree of biosafety**
- | suitable for **all stages of production**
- | for **sows, boars and growing piglets**
- | **modular design** and different sizes
