High Efficiency. And only from Big Dutchman.

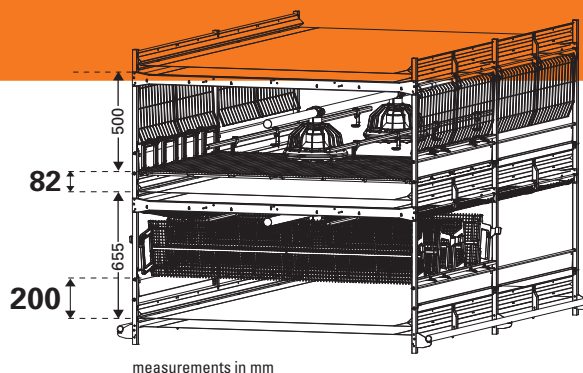

AviMax transit - the broiler battery with new pivoting floor and automatic broiler transport

AviMax transit is an original Big Dutchman concept which combines the **AviMax** broiler cage with an innovative manure belt system that doubles as an efficient new means of broiler transport. **AviMax** has been designed for maximum profitability and cost-effectiveness.

- easy to operate pivoting floors => quick and cost-saving moving-out of broilers
- flexible, soft plastic flooring prevents breast blisters, for optimum manure penetration and a hygienic bird area

The patented **AviMax** transit broiler cage from big Dutchman does not require any extra height adjustment for moving out the broilers due to the revolutionary technology implemented: the distance from manure belt to cage floor is increased from 82 mm for transporting manure to a practical 200 mm for transporting the birds (up to 3kg) when pivoted up, at a constant tier height of just 655 mm.
